DETAILED ACTION

Response to Amendment

1. The amendments to Claims 3-4 in the submission dated 4/20/06 are acknowledged and accepted.

Response to Arguments

2. The Applicants argue that, with respect to newly amended Claims 3-4, the combined teachings of Tsuji and Pedrotti et al. fail to teach or reasonably suggest that no fiber within the optical fiber bundle produce multiple images of the light introduced at the first end. After reviewing Tsuji and Pedrotti et al., the Examiner agrees, and respectfully withdraws the rejections in Sections 7 and 9 of the Office Action dated 11/22/05.
3. Claims 3-4 are now rejected as follows.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

5. Claims 3-4 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the

relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Claims 3 and 4 both recite the limitation that ‘...no fiber within said optical fiber bundle produces multiple images of the light introduced at the first end...’. However, after reviewing the specification and drawings of the disclosure, such limitation does not appear to have clear and unambiguous support from the specification and drawings of the instant disclosure. Specifically, Page 7, lines 5-16 of Applicants’ disclosure discusses the use of either an individual fiber of large core diameter, or a fiber bundle comprising many individual fibers. Further, the light transmitted from such an individual fiber or fiber bundle in the recited optical system will retain its inhomogeneous intensity characteristic (See for example Page 9, lines 12-14; Page 12, lines 8-15) at the output end of the individual fiber or fiber bundle. However, there does not appear to be any particular discussion regarding the lack of formation of multiple images of the incident light which is introduced at the input end of the individual fiber or fiber bundle.

Allowable Subject Matter

6. Claims 7-10 are allowed.
7. The following is a statement of reasons for the indication of allowable subject matter:

Claims 7-10 are allowable over the cited art of record for at least the reasons as previously set forth in Section 11 of the Office Action dated 11/22/05.

Conclusion

8. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
